

Scan 2-D Barcodes to Reduce the Length of Customer Appointments and Process Returns Faster

Motorola™ Symbol DS6707DC

The software supports the use of the Motorola Symbol DS6707DC handheld digital imager scanner. With a viewfinder and an aiming bull's-eye to facilitate accurate point-and-shoot aiming for image capture, the Symbol DS6707DC is easy to use and requires virtually no training.

Process More Returns in Less Time

Using a handheld scanner, start a tax return and automatically populate form W-2 and schedule K-1 data with a simple scan of the two-dimensional (2-D) barcode. Data is automatically added to the return, allowing you to shorten customer appointments and process returns faster.

Improve the Efficiency of Your Tax Office

Beginning Tax Year 2010, all of the data on W-2 forms and K-1 schedules will be included in a 2-D barcode on the form. You can quickly and easily start the tax preparation process by capturing this information with a handheld scanner.

- Process returns faster
- Reduce the length of customer appointments
- Eliminate data entry errors
- Shorten client wait times
